

Analizando logs no Linux

Cenário

Sou analista Soc da EmpresaX, minha missão hoje é analisar logs do Linux para identificar dois incidentes:

1 - Qual endereço IP falhou ao fazer login com vários usuários via SSH?

Para solucionar o primeiro incidente irei abrir o terminal do Linux e usar o seguinte comando:

`cat /var/log/auth.log | grep "sshd" | grep -E 'Accepted|Failed'`

```
ubuntu@thm-vm:~$ cat /var/log/auth.log | grep "sshd" | grep -E 'Accepted|Failed'

2 - Qual usuário foi criado e adicionado ao grupo "sudo"?

Para descobrir isso usarei o comando:

`cat /var/log/auth.log | grep -E '(passwd|useradd|usermod|userdel)\['`

```
ubuntu@thm-vm:~$ cat /var/log/auth.log | grep -E '(passwd|useradd|usermod|userdel)\['
